RE: National Gypsum Property, Millington, New Jersey

Dear Mr. Jurewicz:

The engineering report that was submitted proposing improvements to the above referenced property to mitigate the potential for asbestos contamination of the Passaic River has been reviewed by an engineering member of my staff. He has visited the site on several occasions and it is his opinion the engineering report does not sufficiently indicate the various conditions that now exist at the referenced site, especially the depiction of a bank on which sandbags are proposed to be placed. The proposed improvements, although suitable for certain areas of this site, are not feasible for the entire site.

I suggest a joint, on site inspection be arranged in hopes of amending your proposal to reflect the on site conditions and develop adequate remedies to prevent further erosion of the site. To arrange for such a joint inspection, contact Frank Coolick of my staff at (609) 292-0242.

Very truly yours,

*Beatrice S. Tylutki*
